# **VARUN CHOUDHARY**

## CONTACT

- 0 +91 9911880799
- o varun.choudhary2512@gmail.com
- <u>Leetcode</u>
- PortFolio
- Github

## **SKILLS**

- Programming Languages:
   JavaScript, HTML5, CSS3, C++,
   Python,TypeScript
- Frontend Development:
   React.js (Hooks, Context API,
   Redux), Nextjs, Tailwind CSS,
   Motion
- Backend Development :
   Node.js, Express.js, RESTful API,
   Django, Flask , Redis
- Database Management : MongoDB (Mongoose) , PostgreSQL
- Version Control and Collaboration: Git, GitHub
- Deployment and Hosting:
   Railway, Render, Vercel,
   GoDaddy
- Currently Learning:
   Solidity, web3, docker

# **EDUCATION**

# Netaji Subhas University of Technology

2023-2027

University of Engineering and Technology

B.Tech in Electronics And Communication.

## **EXPERIENCE**

## Ignicult

JAN2025-APRIL 2025

Full Stack Engineer at Ignicult

- Designing and implementing scalable, high-performance web applications for a revolutionary hyper-casual gaming platform integrating off-chain and on-chain rewards. Managing the entire development lifecycle, from design to enduser application, ensuring seamless integration of Web3 technologies(sdk).
- View The Design and Frontend Ignicult

# **PROJECTS**

#### **Animated-Videos-Genrator**

May-2025

#### GITHUB DEMO

- Built a full-stack web app that transforms natural language **prompts into dynamic animations** using Al and p5.js.
- Developed a custom p5.js sandbox for securely executing and rendering generated code in-browser.
- Integrated Google Gemini (LLM) to generate executable p5.js code from user input in real time
- Architected a **Node.js** + **Express** backend with robust API routing and environment-based Gemini key handling.

#### RealTimeEditor

JAN-2025

## GITHUB DEMO

- Developed a Full-Stack Collaboration Tool: Designed and implemented a realtime collaboration platform tailored for frontend developers and interviewers, facilitating seamless teamwork through live coding, design uploads, and real-time annotations.
- Integrated Live Code Editor: Built a powerful CodeMirror-based editor, enabling real-time coding in HTML, CSS, and JavaScript with instant live preview.
- Enabled Real-Time Synchronization: Leveraged Socket to synchronize code changes, annotations, and design uploads across multiple users, ensuring a smooth and interactive collaboration experience.
- Room Management: Built features for creating and joining collaboration rooms.

# **BIGGAMEWARS**

**DEC 2024** 

#### GITHUB DEMO

- A full-stack web application using the MERN stack (MongoDB, Express.js, React.js, Node.js) to facilitate team-based competitions for popular games like Valorant and RGMI
- Applied JWT-based authentication for secure login and signup functionality.
- Built features for user profile management, allowing users to **update their usernames** and contact the admin team directly.
- **Deployed** the application on a **custom domain** ensuring a professional and reliable web presence.
- Estimated to onboard 1,000+ active users

## **VIDEOPLAYER**

NOV-2024

#### GITHUB DEMO

- A **video player web application** using React for the frontend and MongoDB for video metadata storage.
- Enforced fully browser-based seamless video upload and playback functionality, enabling users to watch videos directly in the browser without additional software.
- Ensured persistent video availability by securely storing video metadata in MongoDB, allowing access even after page reloads.
