

VARUN CHOUDHARY

✉ varun.choudhary2512@gmail.com • 🌐 Portfolio • 🐙 github.com/varruunnn • 📄 LeetCode

Skills

Languages: TypeScript, JavaScript, Python, C++
Frameworks & Libraries: React, Next.js, Node.js, Fastify, Express
Databases & Messaging: PostgreSQL, MongoDB, Redis
Cloud & Infrastructure: Docker, AWS, CI/CD, kubernetes, GitHub Actions
Testing & Tooling: JSDOM, Jest

Experience

Larc Ai

Nov 2025 – Jan 2026

Full Stack Engineer

- Designed and implemented the core routing logic for **LARC Router**, reducing API token costs by up to **60%** by dynamically routing prompts to the most cost-effective **LLM**.
- Built a **scalable pay-as-you-go backend** with **REST Framework** and **Cashfree PG**, securely handling fractional credit deductions using Python's **Decimal** type.
- Integrated **LangGraph** to build fault-tolerant, stateful AI workflows with execution validation before wallet deductions, preventing incorrect billing on failed upstream model responses.

Ignicult

Feb 2025 – Apr 2025

Frontend Engineer

- Built the main platform page using **Thirdweb SDK** for seamless wallet connectivity and Web3 interactions; integrated backend APIs for dynamic data fetching.
- Developed an **analytics dashboard** visualizing key metrics from backend APIs for platform performance detail.

Sugar Labs

2026

Open Source Contributor – Music Blocks

- Contributed **merged pull requests** focused on CI/CD reliability, testing infrastructure, dependency maintenance.
- Reduced Docker image size from **~ 2.42 GB to ~ 411 MB**, significantly improving CI execution performance and build efficiency.
- Resolved complex CI failures like mocked Tone.js Promises and browser-environment testing in **JSDOM**.

Projects

The Last-Minute Life Saver

🐙 GitHub 📄 Live

Event-Driven AI Productivity Ecosystem / Next.js, Redis, Bun, WebSockets

- Built an event-driven backend using **Next.js**, **Redis**, and a **bg** worker to move AI processing out of the request path and keep API responses fast.
- Developed a multi-step **Gemini** workflow that analyzes task urgency and generates structured milestones using schema-validated JSON outputs.
- Integrated **Pusher WebSockets** to push real-time task updates from bg workers to the frontend, replacing periodic database polling.
- Implemented automatic schedule re-planning by detecting overdue milestones and updating timelines in the bg.

PromptTracker

🐙 GitHub 📄 Live

AI Prompt Observability & Evaluation Platform / Next.js, Fastify, Postgres

- Built an AI observability platform using **Next.js**, **Fastify**, and **PostgreSQL** in a **Turborepo** monorepo.
- Developed a **Fastify API Gateway** and **TypeScript SDK** for prompt execution with latency and token telemetry.
- Implemented an asynchronous **LLM-as-a-Judge** worker to score outputs and persist evaluations without blocking API requests.

Education

Netaji Subhas University of Technology (NSUT)

2023 - 2027

B.Tech in Electronics and Communication Engineering

Achievements

- Among the **Top 3 contributors** for GSoC 2025 at OSL Alpha One Labs.
- Solidus AI Hackathon 2025 — Top 100 Submissions:** built a web-based real-time lane-detection.
