

VARUN CHOUDHARY

✉ varun.choudhary2512@gmail.com • 🌐 Portfolio • 🐙 github.com/varruunnn • 📄 LeetCode

Skills

Languages: TypeScript, JavaScript, Python, C++
Frameworks & Libraries: React, Next.js, Node.js, Fastify, Express
Databases & Messaging: PostgreSQL, MongoDB, Redis
Cloud & Infrastructure: Docker, AWS, CI/CD, kubernetes, GitHub Actions
Testing & Tooling: JSDOM, Jest

Experience

Larc Ai

Nov 2025 – Jan 2026

Full Stack Engineer

- Designed and implemented the core routing logic for **LARC Router**, an AI system that dynamically selects the optimal **LLM** based on cost, latency, model capability, and developer-defined constraints.
- Built **scalable backend services** to orchestrate multiple language models, manage request flow, and aggregate responses using developer-provided API keys, ensuring high reliability and performance.
- Integrated **LangGraph** and **LangChain** to create flexible, stateful AI workflows and decision graphs for intelligent model evaluation and execution.

Ignicult

Feb 2025 – Apr 2025

Frontend Engineer

- Built the main platform page using **Thirdweb SDK** for seamless wallet connectivity and Web3 interactions; integrated backend APIs for dynamic data fetching.
- Developed an **analytics dashboard** visualizing key metrics from backend APIs for platform performance monitoring.

Sugar Labs

2026

Open Source Contributor – Music Blocks

- Contributed **merged pull requests** focused on CI/CD reliability, testing infrastructure, dependency maintenance.
- Reduced Docker image size from **~ 2.42 GB to ~ 411 MB**, significantly improving CI execution performance and build efficiency.
- Increased unit test coverage across multiple modules using **JEST** and **JSDOM**.
- Resolved complex CI failures like mocked Tone.js Promises and browser-environment testing in **JSDOM**.

Projects

PromptForge

🐙 GitHub 📄 Live

AI Prompt Observability & Evaluation Platform | Next.js, Fastify, Postgres

- Architected a **full-stack AI observability platform** within a **Turborepo monorepo**, managing shared database schemas and UI packages across multiple services.
- Built a high-performance **Fastify API Gateway** and custom **TypeScript SDK** to decouple prompt execution from client applications, capturing latency and token telemetry in real-time.
- Engineered an asynchronous **LLM-as-a-judge polling worker** to evaluate LLM outputs for quality and hallucination, storing grades without blocking the main execution thread.

ForgeQueue

🐙 GitHub

Distributed Job Queue System | Bun, TypeScript, Redis

- Built a **distributed job queue** inspired by BullMQ using **Bun** and Redis.
- Implemented **at-least-once delivery**, retries, and crash recovery using atomic Redis Lua scripts.
- Designed a **self-healing scheduler** with delayed jobs and Dead Letter Queue (DLQ).

Education

Netaji Subhas University of Technology (NSUT)

2023 - 2027

B.Tech in Electronics and Communication Engineering

Achievements

- Among the **Top 3 contributors** for GSoC 2025 at OSL Alpha One Labs.
- Solidus AI Hackathon 2025 — Top 100 Submissions:** built a web-based real-time lane-detection.
